Week 5

Task Outline for week 5:

1. Finalize sanyiko.com SEO performance. From here on we make continuous little improvements.
2. Learn Native script for Mobile App development.
3. Learn Sanyiko App archiecture

Monday

- take care of how our pages are displayed in google searches
- Deal with local SEO settings(contacts, maps) --- plus submit site-map.
- Start learning native script.

Tuesday

- continue learning nativeScript :
    - build a simple supermarket App. (using static data and avoid using HTTP APIs) {minimum 2 days work}

Wednesday

I read and experimented with Nativescript. Got stuck on trying to read the guide documentation. Harsha helped me out.
However, I decided to switch to React Native. Considering React Native has better documentation and a bigger support community when compared to Nativescript
The Javascript family does not interest me at all. It does not rhyme with my programming style.
So I settled for Flutter. It uses the Dart programming language. Statically typed, type-safe, design-first --- now that rhymes with my programming style.

So yes, I will learn Flutter from here on.

Thursday

- ☑ Start Learning Dart Language that is used in Flutter

Friday

In as much as Dart is easy & straight-foward, Flutter itself has a huge learning curve.
I'm going back to Nativescript, At least the CSS and Javascript skills that I will learn there will be transferable to other areas of my programming life.

- ☑ Learn CSS and learn it well. Learn it anew to avoid pointless float frustrations that take half your day .
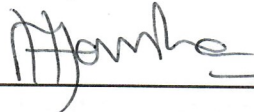

Saturday

- ☑ Continue learning CSS.

Week 6

week 6 task outline:

- Finish learning CSS
- Create a pseudo-app to show CSS and Javascript understanding
- start learning the Sanyiko app.
- add at least 2 pages to Sanyiko --- with the aim of increasing its SEO.
- renovate the imsguru website.

Monday

- Finish learning CSS
- Create a pseudo-app to show CSS and Javascript understanding

Tuesday

imsguru.com needs to be renovated because we are starting to on-board new MFI-Expert clients, so this is a PRIORITY

- ☑ Fix some pages on alpha.imsguru.com
- ☑ continue practising CSS in nativescript playground

Wednesday

- ☑ learn CSS grid.
- ☑ Learn CSS flexbox.
- ☑ Build at least 3 pages using the 2 tools.
- ☑ Build the homepage of the phone app. {... this is an extra task}

Thursday

It has become clear that coding the user Interface is not my cup of tea.
I will therefore build bare-minimum UIs and concentrate on the back-end

tasks:

- Build bare minimum pages.

- Have a lesson with Harsha on the the Backend architecture of Sanyiko Mobile App.

The deadline for publishing imsguru.com has been pushed to Monday 1st Aug 2022. So from here on I will concentrate on beta.imsguru.com

Friday

- ☑ Continue working on the beta.imsguru.com website
  - ☐ ☑ Finish homepage
  - ☐ ☑ Finish contact page
  - ☐ ☑ Find suitable plugins to help build clients page
